Lecture 7: Wide & Deep

HKUST PHD Program Application

GPA (a)	Admission?
2.1	0
4.2	1
3.1	0
3.3	1

```
x_{data} = [[2.1], y_{data} = [[0.0], [1.0], [3.1], [0.0], [3.3]]
```

GPA enough? How about experience and others?

GPA (a)	Experience (b)	Admission?
2.1	0.1	0
4.2	0.8	1
3.1	0.9	0
3.3	0.2	1

```
x_{data} = [[2.1, 0.1], y_{data} = [[0.0], [1.0], [3.1, 0.9], [0.0], [3.3, 0.2]]
```

```
 \begin{array}{lll} x\_data = & & & & & & & & \\ [2.1, \ 0.1], & & & & & & & \\ [4.2, \ 0.8], & & & & & & \\ [3.1, \ 0.9], & & & & & \\ [3.3, \ 0.2]] & & & & & \\ \end{array}
```

Compute and print loss

nn.Linear modules which are members of the model. criterion = torch.nn.BCELoss(size average=True) optimizer = torch.optim.SGD(model.parameters(), lr=0.1)

our model model = Model()

Training Loop for epoch in range(100):

Classifying Diabetes

Design your model using class

```
Construct loss and optimizer
(select from PyTorch API)
```

in the SGD constructor will contain the learnable parameters of the two

Training cycle (forward, backward, update)

loss = criterion(y pred, y data) print(epoch, loss.data[0]) # Zero gradients, perform a backward pass, and update the weights. optimizer.zero_grad() loss.backward() ontimizon cton()

Construct our loss function and an Optimizer. The call to model.parameters()

Forward pass: Compute predicted y by passing x to the model

Exercise 7-1

- Classifying Diabetes with deep nets
 - More than 10 layers
- Find other classification datasets
 - Try with deep network
- Try different activation functions
 Sigmoid to something else
